

Samuel Mohr

Full Stack Software Engineer

sam@sammohr.dev | (404) 775-1184 | sammohr.dev | github.com/smores56

Summary

Full stack software engineer with 7+ years of industry development experience. Excellent communication skills, strong experience collaboratively architecting solutions. Detail-oriented with high standards for code quality, design, and performance. Proficient in Rust, Python, TypeScript, and Kotlin, knowledge of multiple frontend/backend web frameworks.

Experience

TODO position title, 7AI Sept 2025 – Sept 2026

- TODO highlight 1
- TODO highlight 2

Software Development Engineer II, Flexport – Seattle, WA July 2023 – Aug 2025

- Created Duty Drawback ("import tax returns") service with React frontend + Rust backend in startup-style team
- Reduced latency from 8 hrs to 3 mins with algorithmically-efficient approach for 80% of company's client claims
- Improved drawback claim totals by 15-30% for various provisions, earning \$1M+ extra commission for single claim
- Developed new Kotlin event processing service for recording historic costs for use in future pricing estimation
- Modeled new cost history service around real-time Datadog dashboard reporting for instant data loss triage
- Kicked off deprecation of prior broken service + moving behavior to new service to avoid constant KTLO work
- Developed a plan to cleanly deprecate historical service to streamline processing of company-wide cost data

Software Development Engineer I, Amazon Web Services – Seattle, WA Jan 2022 – June 2023

- Contributed to AWS Lambda's SnapStart, a feature to reduce cold-start time for serverless invokes
- Developed FuseFS, a Rust-based FUSE/UFFD filesystem, along with TypeScript/Kotlin/Go microservices
- Architected full CD, continuous end-to-end canary latency testing system for full AWS Lambda invoke stack
- Automated visibility on end-to-end Lambda latency drops to within 15 minutes of regression introduction
- Improved P99 cold start invoke latency by 20% by proactively fetching more data for all Lambda functions
- Optimized service performance using Criterion, flamegraph, IO benchmarking, other A/B testing methods
- Acted as rotating on-call for mitigating team service issues and deployment for major AWS Lambda services
- Mentored team members and others on best practices of programming in Rust; mentored junior devs broadly

Research and Development Engineer, ABB – Atlanta, GA Mar 2020 – Dec 2021

- Prototyped and developed the Common Data Layer, a backend-agnostic storage system in Rust
- Designed microservices to abstract over myriad databases, including PSQl, Sled, Apache Druid
- Wrote proposals as RFC's, moderated discussion, and implemented proposed features into services
- Improved throughput of internal storage system more than 20 fold by transitioning to parallel/async behavior
- Interviewed over 20 candidates for Rust, Golang, and React.JS positions

Full-Stack Developer, NCR – Atlanta, GA

July 2019 – Mar 2020

- Added and tested new features for both Spring Boot JSON API and Angular/TypeScript with RxJS website
- Reworked over half of a 3 team codebase in 1.5 months to add unified state management to frontend
- Audited documentation and educated current/new team members on how to maintain code integrity

Education

Georgia Institute of Technology, Master of Science in Computer Science – Atlanta, GA

Dec 2023

- Focused in Computing Systems

Georgia Institute of Technology, Bachelor of Science in Computer Science – Atlanta, GA

May 2019

- Graduated with Highest Honors
- Focused in Systems/Architecture and Intelligence
- Notable Coursework: Compilers and Interpreters, Operating Systems, Systems and Networks

Skills

Programming Languages: Rust, Python, TypeScript, Kotlin, Go, Ruby, Java, Zig, Elm, C, CSS, HTML

Communication Protocols: REST, GraphQL, protobuf, gRPC, Kafka, Kinesis, SQS, Websockets

Development Tooling: Travis CI, Kubernetes, Docker, Git (GitHub and Bitbucket), Jira

Frameworks: React, Arrow, jOOQ, Koin, Angular, Svelte, Axum, Actix Web, Warp, Bulma CSS

Projects

Roc

Open-source functional programming language

- Maintainer for the upcoming Roc functional-but-friendly language focused on safety, runtime + compilation speed
- Orchestrated rewrite of Roc language core from Rust to Zig to coordinate parallel development of compiler stages

smoresboards

- Designed and sold over 50 sub-40% ergonomic keyboards to reduce typing strain

Interests

Tenor singer in multiple nationally-recognized barbershop choirs (Seattle, Atlanta, Georgia Tech)
