Experience

Senior Software Engineer

Boston, MA

7AI

Sept 2025 – Sept 2026

- Owned the 7QL multiplexing query transpiler used by AI agents and security engineers across 20+ datastore backends
- Productionized the 7AI SIEM from a 300k-line Rust prototype to AWS, querying billions of security events per day
- Owned SIEM SQL, the dialect powering every in-house alert detection, transpiled via DataFusion across storage backends
- Delivered federated search, an agent-driven chat tool for interactive data exploration to aid automated alert detection
- Owned DX for all code writers, shipping mise-based agent-integrated dev environments, owned onboarding
- Piloted open-source model dev program (GLM family), projected \$1M+ in annual savings for agentic coding
- Acted as rotating on-call for platform-wide service issues and deployments

Software Development Engineer II

Seattle, WA

Flexport

July 2023 – Aug 2025

- Created Duty Drawback ("import tax returns") service with React frontend + Rust backend in startup-style team
- Reduced latency from 8 hrs to 3 mins with algorithmically-efficient approach for 80% of company's client claims
- Improved drawback claim totals by 15-30% for various provisions, earning \$1M+ extra commission for single claim
- Developed new Kotlin event processing service for recording historic costs for use in future pricing estimation
- Modeled new cost history service around real-time Datadog dashboard reporting for instant data loss triage

Software Development Engineer I

Seattle, WA

Amazon Web Services

Jan 2022 – June 2023

- Contributed to AWS Lambda's SnapStart, a feature to reduce cold-start time for serverless invokes
- Developed FuseFS, a Rust-based FUSE/UFFD filesystem, along with TypeScript/Kotlin/Go microservices
- Architected full CD, continuous end-to-end canary latency testing system for full AWS Lambda invoke stack
- Improved P99 cold start invoke latency by 20% by proactively fetching more data for all Lambda functions
- Optimized service performance using Criterion, flamegraph, IO benchmarking, other A/B testing methods
- Mentored team members and others on best practices of programming in Rust; mentored junior devs broadly

Research and Development Engineer

Atlanta, GA

ABB

Mar 2020 – Dec 2021

- Developed the Common Data Layer, a backend-agnostic Rust storage system abstracting PSQL, Sled, and Apache Druid
- Improved throughput of internal storage system more than 20 fold by transitioning to parallel/async behavior
- Interviewed over 20 candidates for Rust, Golang, and React.JS positions

Full-Stack Developer

Atlanta, GA

NCR

July 2019 – Mar 2020

- Added and tested new features for both Spring Boot JSON API and Angular/TypeScript with RxJS website
- Reworked over half of a 3 team codebase in 1.5 months to add unified state management to frontend

Skills

Programming Languages: Rust, Python, TypeScript, Kotlin, Go, Ruby, Java, Zig, Elm, C, CSS, HTML

Communication Protocols: REST, GraphQL, protobuf, gRPC, Kafka, Kinesis, SQS, WebSockets, AG-UI

Development Tooling: Claude, Codex, LLMs, Agents, Docker, Kubernetes, GitHub, Linear, Jira

Frameworks: Axum, Tokio, Hono, Langchain, React, Arrow, Koin, jOOQ, Svelte, Angular, RxJS

Education

Georgia Institute of Technology

Atlanta, GA

Master of Science in Computer Science

Dec 2023

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science

May 2019

- Graduated with Highest Honors

- Notable Coursework: Compilers and Interpreters, Operating Systems, Systems and Networks

Projects & Interests

Maintained Roc, a functional language focused on safety, runtime + compilation speed

Contributing to the Maki agent harness, a Rust-based Neovim-like TUI focused on performance and extensibility

Designed and sold 50+ sub-40% ergonomic keyboards at smoresboards.com

Tenor in nationally-recognized barbershop choirs (Seattle, Atlanta, Georgia Tech)
